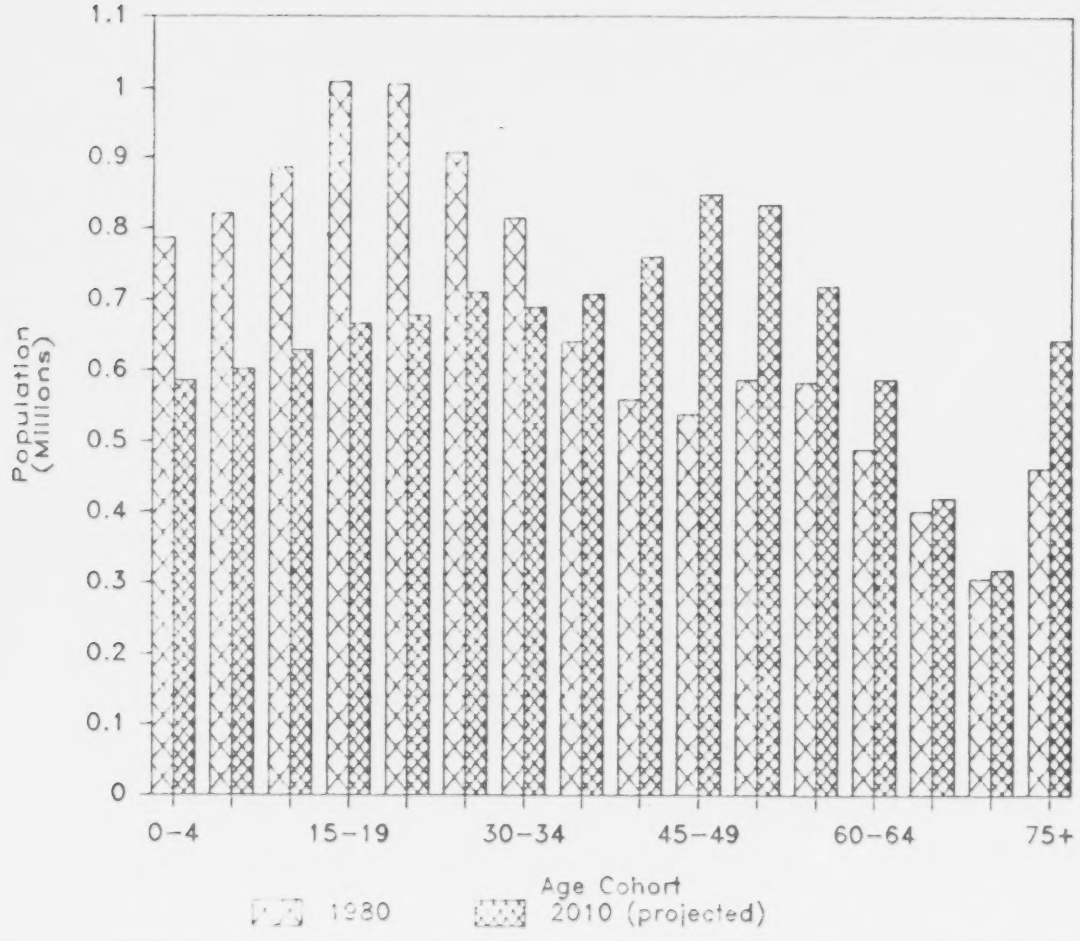
DEPARTMENT OF DEVELOPMENT

POPULATION PROJECTIONS OHIO AND COUNTIES BY AGE AND SEX: 1980 TO 2010

(September 1985)

Projected population: OHIO



INTRODUCTION

These population projections for Ohio's counties are produced in accordance with the August, 1979 Interdepartmental Agreement Providing for Use of Common Population Projections. This agreement states that the Department of Development has sole responsibility for projections of population at State and county levels for State departments and agencies signing the agreement. This revised series of projections are to supercede that series prepared by The Ohio Data Users Center dated June, 1982.

These projections are "baseline" numbers; that is, the implications of various state and local development efforts are explicitly not taken into account. The difficulty of accurately gauging the impact of these efforts precludes their use in projections that must serve many purposes.

This revised series of population projections has been prepared with the intent to align the short-term projections more closely with actual population change that has occurred since 1980.

This projection series incorporates population estimates and components of population change through July, 1984. Concurrent with the economic recession, a majority of counties experienced a shift downward in both the level of migration and births. A comparison of the June, 1982 projection series with post-censal estimates indicates that migration and fertility components have shifted significantly enough to warrant a revision. When comparing interpolated July, 1984 projected populations from the June, 1982 series with Census Bureau July, 1984 estimates (U.S. Bureau of the Census, 1985), projected county populations fall within the following error range:

ABSOLUTE ERROR RANGE	NUMBER OF COUNTIES
< 1%	33
1 - 2.99%	39
3 - 4.99%	14
5+%	2

METHODOLOGICAL CHANGES IN AUGUST, 1984 SERIES FROM THE JUNE, 1982 SERIES

There were several changes made from procedures used, assumptions made, and, in one case, input data - from the June, 1982 projections. These are generally stated below:

AREA OF CHANGE	ITEM OF CHANGE	AUG. '85 MODEL	JUNE '82 MODEL
METHODS	County Proportional Adjustment	State Control Population	No state control

AREA OF CHANGE	ITEM OF CHANGE	AUG. '85 MODEL	JUNE '82 MODEL
METHODS (contd)	Age-Specific Birth rates	Standardized Rates	Unstandardized Rates
	Age-Specific Migration Rates	Linear Regression Prediction	Proportion of County total Migration
	Institutional Populations	Proportionate to Projected Age Group Population	Held Constant at 1980 level
INPUT DATA	1980 Survival Rates	Ohio Rates	National Rates
ASSUMPTION	Projected Net Migration	Target of 25-year Mean	Target of Zero Net Migration

The effect of the above changes on the resulting projected populations vary from county to county; however, the sources of the greatest relative impact are the change in migration assumptions and the adjustment of aggregate county populations forced to the control state population.

OVERVIEW OF THE METHODOLOGY

The population projections for the State of Ohio are presented by age and sex quinquennially from 1980-2010. A modified cohort-component method was used which separately projects fertility, mortality, and migration by sex and age groups. Computations are carried out individually to reflect variations in birth, death, and migration rates for each cohort. Prison populations, military personnel and non-resident college students are projected separately.

BASE YEAR COMPONENT DATA:

1. FERTILITY

Age-specific fertility rates for each county are determined for each five-year age group between 15-49. Fertility rates are derived from 1979-1980 births by age of mother and her county of residence. Fertility rates for the 1980-1985 projection period were estimated on the basis of recorded births through 1983 (Ohio Department of Health, 1980-1983) and estimated female age groups between 15 and 49 years.

2. MORTALITY

1980 age by sex survival rates were derived from an Ohio life table (Swanson, 1984). Operationally, survival rates do not vary across counties.

3. MIGRATION

Residual net migration figures for 1980-1985 are determined by subtracting July, 1984 expected population from the July, 1984 population estimates, then extrapolating this quantity to an April 1, 1985 projection date.

PROJECTION ASSUMPTIONS:

1. FERTILITY

Total births for each five-year period are based on recent Ohio trends as well as projected national trends. Ohio's total fertility rate has paralleled national trends over the last two (2) decades. Our assumption is that Ohio, like the nation, will experience a gradual increase in fertility rates over the projected period for the ages 30-44. The younger childbearing age groups 15-29 are expected to show rate declines.

Ohio's age specific fertility rates are projected to converge to projected national rates (U.S. Bureau of the Census, May, 1984) by the year 2010. County rates are projected to follow the state's graduation. As a result, fertility rates at the county level are individualized but follow the same state and national pattern.

2. MORTALITY

Projection of five-year survival rates by age and sex are based on national mortality assumptions. National survival rate projections completed by the Bureau of the Census indicate a gradual trend towards increased survival rates at all ages to the year 2010 (U.S.Bureau of the Census, 1984). Projected survival rates are assumed to converge to national rates by the year 2010. Unlike fertility and migration rates, survival rates were assumed to be identical for each county and varied only by age and sex.

3. MIGRATION

Assumptions concerning future Ohio migration trends for 1980 to 2010 were based on a combination of 1980-1984 migration data, earlier state trends, and the expectation of convergence to the 1960-1985 average net migration by 2010. Ohio has experienced substantial out-migration over the last two (2) decades. Each county is assumed to experience a gradual regression toward its mean 25-year net migration by 2010. Net migration for each age group is projected as a linear function of the total sex-specific migration rate.

A more detailed statement of the procedures employed in these projections is available upon request for the cost of reproduction. If different presentation formats, summaries, or statistical indicators are required, please contact ODUC at (614)-466-2115.
